The Sunday eight-page edition of the Albuquerque Journal was a magnificent number and would have been a credit to a city much larger than Albuquerque. The stomach of a Gasconer.

In the dyspeptic's stomach the impure gases are generated, after meals, that distend and disarrange it as well as the bowels. The best curative for cramps, colicky pains and heartburn or bilious eructations, is Hostetter's Stomach Bitters. Carbonate of soda and effervescent aperients are far inferior to it in efficacy, and as physicians now understand, impair the tone of the stomach. Options libations of any sort are injurious to the stomach, and to dilute its juices is certainly not the way to increase their digestive usefulness. Aided by the Bitters, the digestive organs, when enfeebled and disordered, regain their lost tone and regularity, not, of course, immediately but with a degree of rapidity highly indicative of the excellence of the remedy. It has the further effect of regulating the bowels and liver, protecting the system against malarial fevers, rheumatism and neuralgia, and increasing constitutional vigor.

Scuppernon and Cattle Company.

A representative of the JOURNAL-MINER yesterday visited the ranch of the Gopher Horn and Cattle Company, located about fifteen miles north east of Prescott. This company has without doubt one of the finest ranges in Yavapai county. They have at present several hundred head of horses and several this spring to brand over 200 colts. Their principal water supply comes from Coyote springs, located in a canyon in the Black Hills range of mountains. Three miles from this, where their corral is at present located, is a well, with a windmill attached, for pumping, with troughs, from which probably 2,000 head of stock can be watered daily. The corral is the most substantial and most conveniently arranged of any we have seen in this section of the country. Mr. E. H. Witherell, a cousin of the treasurer of the company, and an experienced range man, is in charge of the property at present. It is his intention to ship the greater portion of the horses to the eastern market and during the next few months place 2,000 head of cattle on the range. He is also engaged in building a residence 24 x 16 feet, with wings 14 x 16 and 12 x 16 feet, respectively, for the accommodation of his family, whom he expects soon from the east. He has also other improvements under way, one very important one being the piping of water from the spring, a distance of three miles to the eastern edge of the Loschene valley. This accomplished, the company will practically have no limit to the range which they will control, while their water supply is considered sufficient to supply from 10,000 to 15,000 head of stock.
